Course Description

In this course we will examine the fundamentals of phonetics, in particular the sounds and symbols that are used in the pronunciation of English. The goal of the course is to provide students with a basic understanding of phonetics and of the sound system of English by means of a combination of lectures presenting the issues, practical group exercises, where there will be an opportunity to practice the principles discussed in lectures, and homework assignments. This class will be aimed at students with little or no previous background in phonetics.

Course Textbook

For this class the textbook is:

Stonham, John. 2011. *[Doing Phonetics: An introduction to general and English phonetics](#)*. Seoul: Kyung Moon Publishing.

Students can also read one or more of the additional recommended books below. Students are responsible for being familiar with the information in the textbook and from the lectures, handouts and exercises. Everything will be included in the examinations.

Course Website

There is a website for this class where information about lectures, homework assignments, exams, and various other things will be posted. Students should visit the site regularly to check for updates. Login id and password will be given at the first class meeting.

Phonetic Software

There is also a phonetic analysis component to this class. Students will analyze speech using available phonetic software, including Praat and Audacity. The results will be handed in for part of the course marks. **Please download the following free software from the websites below and install it on your computer:**

Praat: <http://www.fon.hum.uva.nl/praat/>

Audacity: <http://audacity.sourceforge.net/download>

Additional Readings

Students may wish to consult other introductory textbooks for further information. The following is a partial list of recommended books.
